Fiber 4g | Sodium 628mg | Sat. Fat 10g

INGREDIENTS (serves 4)

- 1 lb. lean ground turkey
- 1 tsp. fresh grated ginger or ½ tsp. ground ginger
- 1 tsp. mince garlic or ½ tsp. garlic powder
- 2 tbsp. low sodium soy sauce
- 2 tbsp. Hoisin sauce
- 1 cup instant brown rice
- 8 oz. canned bamboo shoots, drained
- 8 oz. canned water chestnuts, drained
- ¾ cup fresh carrots, grated
- 12 large Romain Lettuce leaves
- black pepper to taste (optional)

DIRECTIONS

1. In a medium sized sauce pan, cook the rice according to package directions.
2. Meanwhile, over medium heat, cook the ground meet in a large skillet until no longer pink, drain and discard the oil.
3. To the cooked ground turkey add the spices, soy sauce, carrots, bamboo shoots, and water chestnuts and 1 tbsp of water. Turn heat down to medium, and cook until the carrots are tender (about 5 minutes). Watch closely and sprinkle in a little water if needed to keep from burning.
4. Once the carrots are tender, add the Hoisin sauce and prepared rice and gently stir to incorporate.
5. Set three lettuce leaves on a plate and serve 1/12th of the turkey mixture for each leaf.
6. Top with scallions, peanuts, and or cilantro if desired. Repeat for the three remaining servings.

DIETITIAN TIP

Food claims on packaging can be confusing. “Reduced” means less than the original version, and “low” means that a nutrient cannot exceed an established value by law.

NUTRITION EDUCATION

What is the difference between “low” or “reduced” when it is seen on food packaging? For example, a product may have a “reduced” fat or “reduced” sodium print on the front of its package, but another item may have “low-fat” or “low sodium.” The term “reduced” when seen on the packaging means the item is 25% less than its regular unreduced item. On the other hand, “low” means that the product has not exceeded a limit for a particular nutrient. For example, a reduced sodium sauce means 25% less sodium than the original option.

In contrast, a low sodium sauce means that regardless of comparing it to any other benchmark product, it has less than or equal to 140 mg of sodium per the regular amount commonly consumed. Both claims must meet a lawful standard for use on packaging. Just remember, (reduced) is compared to another product (the original version) and does not mean that it does not have excessive amounts of sodium. It just means there is less than the original. When the word “low” is used on food packaging, then by law, the nutrient that is being called out cannot exceed a certain level as determined by law. All types of foods fit. The key is balance by paying attention to the overall values of nutrients and not exceeding recommended daily limits for sodium, fat, or added sugar. To assist with learning more, the “Dietary Guidelines for Americans” is a scientifically credible resource. A great way to assist with the confusion of claims on the packaging is to remember that reduced helps you eat a nutrient but does not mean the amount of fat, sodium, or sugar is reasonable. Whereas the word “low” is better able to guide not exceeding recommended daily limits.
